(54) Title: METHOD AND SYSTEM FOR APPLIANCES REMOTE CONTROL

(57) Abstract: Remote control system for electric or electronic appliances comprising at least one remote control that can be actuated by a user and at least one electronic apparatus installed on each of said appliances and intended to communicate by air with said remote control to actuate a status change of the appliance selected by the user, characterized in that said electric apparatus of each appliance comprises at least: - a transmitter (13) intended to transmit a message by air to the remote control; - a receiver (14) intended to receive and decode a message sent by air by the remote control; and - an identification address (16) that said electronic apparatus is capable of transmitting by the transmitter, and in that at least one remote control comprises: - a transmitter (17) intended to transmit a message by air to the electric or electronic appliances, - a receiver (18) intended to receive and decode a message sent by air by at least one of said appliances and having an aiming axis to be aimed towards an appliance to be controlled; and at least one key or similar device to allow the user to send an actuation command to a selected appliance, wherein the remote control receiver is provided with a directional receiving device to allow the reception only of the signals coming from sources located outside a cone with axis coinciding with the remote control aiming axis.
